Katrina,

We do not keep the documents at the EPA Library, they are available on line, The Bristow Library and ODEQ.

You are welcome to list my number if you want.

Thanks, Bill

Subject: Wilcox: Draft Slides for Open House

Good Afternoon, please find a draft set of slides for the open house scheduled October 21, 2015. Please send any comments. I put notes on each slide to convey the general thought process behind each slide and how each would flow into the next. My expectation is that most of these slides will only need about 1 minute or less to summarize.

Thanks

Todd, if you are able to make adjustments to the factsheet, please consider the information listed below. I believe that based on our conversation yesterday this may not be possible, and we thought we could provide the slide presentation as the hand-out.

- The ODEQ collects water samples every three months from drinking water wells near the site. The results are provided to the well owners. At this time, no contamination above drinking water standards has been found. ODEQ completed the latest sampling event in June 2015, and will continue sampling into 2016 on a semi-annual basis.
- The EPA and ODEQ talked with property owners that have concerns about contamination on their property.
 - On July 31, 2014, EPA put a locked cap on an abandoned drinking water well located near the church.
 - On August 5-9, 2014, EPA put up a fence with signs around an oily sludge area on a residential property.

9761224

- In December 2014, EPA completed soil sampling at a residential property, and provided results to the property owner.
 - In March 2015, EPA and ODEQ began coordinating with residents interested in having their property sampled. In April, EPA and ODEQ met with each resident interested in sampling to talk about the plan and schedule a time for the sampling.
 - In May/June 2015, EPA sampled all residential properties. These properties were sampled and analyzed for organics, inorganics, pesticides, and polychlorinated biphenyls. Results are expected by August 2015. When received, EPA and ODEQ will meet with each resident to discuss the results.
- The EPA and ODEQ began Phase 1 remedial investigation activities in September 2015 with additional Phase 1 activities to be conducted in October and November 2015. The Phase 1 activities include the use of geophysics and direct sensing technologies to better understand the subsurface.
